Say goodbye to spots,

Undamage sun damage with IPL and preventative maintenance.

As years of sun exposure contribute to sun damage as well as age spots, a successful skin care program using IPL as the initial treatment, and Obagi skin care to prevent future spots will help reverse the process.

What is IPL?

IPL, also called FotoFacial® and Photorejuvenation, is a breakthrough technology that has become one of the most popular cosmetic treatments. Both the pleasures and stresses of life, along with the simple passage of time, tend to cause our skin to appear older. Intense Pulsed Light is a non-ablative, non-wounding, laser treatment that can be customized to your individual needs and will provide superior cosmetic results and high levels of satisfaction. After only the first treatment, skin feels smoother and appears more even toned. The amazing thing is that IPL can be used on nearly any part of your body including your neck, hands and feet.

IPL treatments utilize intense visible pulsed light to effectively treat skin conditions. The process begins with a consultation and a treatment plan. A treatment schedule is designed for specific skin types and areas that will respond best to IPL technology. The informed consent process involves a discussion of the procedure, enumeration of risks, discussion of anticipated results, and presentation of alternative options. During this consultation, you have an opportunity to ask questions. Your understanding of benefits and risks is necessary for informed consent to take place.

An IPL treatment package consists of a series of five to eight treatments. A series of at least 5 treatments is needed to obtain the best results. Some patients may benefit from more treatments depending on the severity of the condition treated. Treatments are given 3-4 weeks apart.

Preventative Maintenance with Obagi Nu-Derm® Skin Care System

As you age and your skin incurs the abuse of daily living (such as sun, stress, pollution), the cell turnover rate slows down. This means that the new cells take longer to form and reach the top. The old cells accumulate and stay on the surface longer. You begin to notice those unwelcome signs of aging, including fine lines and wrinkles, freckles and age spots, uneven skin tone, loss of elasticity and loss of natural skin hydration.

The Obagi Nu-Derm System, a physician-prescribed skin care system, accelerates the cellular renewal. This System penetrates deep to improve damage in layers of the skin. It boosts functions of the skin at the cellular level to improve skin's cellular function to help it look and act younger and healthier.

Kamala Aesthetics Medical and Laser Associates are Licensed Medical Professionals dedicated to providing aesthetic and cosmetic services for men and women of all ages and skin types.

Our procedures are medically supervised and tailored to meet each client's specific needs to help you achieve and maintain the revived, refreshed and renewed skin you've been looking for.
