

Laser Skin Tightening

The laser treatment is specifically designed to be safe for every skin type. The laser light pulse stimulates natural growth of the collagen fibroblasts deep in the dermis. As these little collagen factories come to life and begin to reproduce, skin rebuilds from the inside. The result is younger looking skin. Results are quite visible as the signs of fine lines and sun damage begin to fade away. As the collagen layer thickens, skin tone and elasticity improve and time lines fade to a youthful glow.

Collagen, the underlying structure of our skin, provides the youthful, tight/smooth skin, appearance we know in our youth. Due to certain environmental factors, i.e., sun, smoke, pollution, and free radicals, this structure is compromised and gradually breaks down as we age. The result is the loss of elasticity and the formation of fine lines and wrinkles. Kamala Aesthetics Medical and Laser Associates use breakthrough laser treatments that rebuild collagen layers of skin from the inside. By selectively wounding each layer of the dermis independently, the body's natural wound healing responses kick in and collagen is produced.

About Laser Skin Tightening:

- Collagen is the basic building block of our skin
- Softens fine lines and wrinkles
- Improves skin tone and elasticity
- Safe for all skin types and colors, ages, male/female
- No injections, chemicals or heat
- No interruption of daily activities
- Treatment takes 10-20 minutes
- Reapply your makeup and return to your day
- 4-6 treatments at monthly intervals for the most gratifying results
- Combining laser treatments with a healthy lifestyle and a skin care program will provide the best results

Indications for Treatment:

1. Fine Lines/Wrinkles by eyes and mouth
2. Depression Scars/Acne Scarring
3. Stretch Marks
4. Texture modification
5. Neck Rejuvenation
6. Elbows/knees
7. Cheeks
8. Forehead

FDA Approvals:

General Dermatology/Skin
Peri-Orbital/Peri-Oral Facial Rhytids (wrinkles)

Before Laser Wrinkle Correction:

- Do not wear makeup or contact lenses to the treatment
- Sign the procedure consent form.
- As the esthetician begins preparation for treatment, your face will be cleansed and an anesthetizing cream will be applied to your face. You will wait 25 minutes for the cream to take effect – your face will feel a similar numbness like Novocain from the dentist.
- The treatment will last about 20 minutes, during which time you will feel a cool spray of cryogen and a slight sting (like a rubber band snap).

After Laser Wrinkle Correction:

- Your face will be tingling from the effects of the treatment and the cream for about one hour
- There should be minimal redness or tenderness; ice may be applied if you wish
- You may go back to your normal daily activities immediately.
- It is not recommended to apply makeup or skin care products the remainder of the day
- Use the Kamala Aesthetics Medical and Laser Associates After Care products as recommended
- Schedule next month's treatment.
